1. What Is This Platform

The TrustedNetworkx Partner Hub is a **white-label partner enablement portal** for telecom agents, MSPs, VARs, and interconnect partners. It gives TrustedNetworkx:

- **Pipeline visibility** — see every deal every partner is working, in real time
- **Content distribution** — sales decks, battle cards, one-pagers served from a single source
- **Training & certification** — structured LMS with video courses, documents, and progress tracking
- **Lead management built in** — CRM with contacts, companies, leads, and embeddable capture forms
- **Multi-tenant isolation** — each partner agency sees only their own data; you see everything as admin

The product line includes: **POTS replacement, Hosted PBX / UCaaS, SIP trunking, internet connectivity, wireless failover, and managed voice.**

2. Roles & Permissions

Admin (Carter)

Can do	Cannot do
See all accounts, all data, all deals	—
Create/suspend partner accounts	—
Assign roles (admin/manager/user)	—
Approve or deny registration requests	—
View audit log of all admin actions	—
Invite partners by email	—

Manager (Partner agency lead)

Can do	Cannot do
See all data within their own agency	See other agencies' data
Invite new users to their agency	Promote users to admin
View all agency deals and contacts	Access admin panel
Manage team members (deactivate)	Change their own role

User (Agent / Sales rep)

Can do	Cannot do
See their own leads, contacts, companies	See other users' data (even same agency)
Register deals	Invite other users
Access content library and training	Access admin panel
Use the AI Assistant	Change roles

Role assignment: A user's role is stored in the `profiles` table and loaded on every session. Role changes take effect on next login. The service role key is never exposed to the client.

3. Architecture

Tech Stack

Layer	Technology
Frontend	Next.js 16 (App Router), React 19, TypeScript
Styling	Tailwind CSS v4, CSS custom properties
Auth	Supabase Auth (email/password, JWT)
Database	Supabase Postgres with Row-Level Security
Charts	Recharts
Icons	lucide-react
Font	Inter (via next/font/google)
Deployment	Vercel (push-to-deploy from GitHub)

4. Account Lifecycle

Registration Flow

Invite Flow

Deactivation

- Manager or Admin deactivates a user
- User's session is invalidated immediately
- User's data is preserved (soft delete) — no data loss

- Reactivation restores access
-

5. Page-by-Page Reference

5.1 Home Dashboard (/)

Personalized greeting, quick-action cards, 6-stage onboarding tracker, recent notifications.

Admin view: Sees a blue banner "Admin view — all accounts, all data." Stats are global (across all partner agencies).

Agent view: Sees only their own stats, their own onboarding progress, their own notifications.

5.2 Content Library (/library)

Folder-based content browser. Folders: Co-Branded Collateral, Pitch & Demo Resources, Compliance & Life-Safety. Each folder shows item count and last-modified date.

Item actions: Preview (opens file viewer) · Share (generates tracked link) · Download.

Future: Tracked share links log viewer events → feed engagement analytics on deal detail pages.

5.3 Documentation LMS (/documentation)

Three-column layout: left section tree, center lesson content, right progress card.

6 sections: Working with TrustedNetworkx, Account & Operations, Product Training, Sales Enablement, Marketing, Client Onboarding.

Lesson features: Mark as completed, Present mode (fullscreen for screen-sharing), progress bars.

5.4 Training Hub (/training)

Quick links to Video Library, Document Library, Certification (coming soon).
Featured training cards with type badges, duration, and module counts.

- **Videos (/training/videos)**: 9 video cards with play overlays, categorized by Product/Sales/Technical/Onboarding
- **Documents (/training/documents)**: 12 downloadable docs with type badges (PDF, XLSX, DOCX) and page counts

5.5 CRM Dashboard (/crm)

Live Supabase data. Shows total leads, companies, contacts, and won deals.
Quick-link cards to Leads, Contacts, Companies, Forms. Recent leads table with status badges.

Scoping: Admin sees everything. Agents see only their own records.

5.6 CRM — Leads (/crm/leads)

Full leads table with search and status filter. Columns: name, company, status badge, estimated value, date. Statuses: new, contacted, qualified, proposal_sent, won, lost.

5.7 CRM — Contacts (/crm/contacts)

People directory. Columns: name, email, phone, status, created date. Search across name and email.

5.8 CRM — Companies (/crm/companies)

Grid of organization profiles. Each card shows company name, industry, contact count, lead count, and website. Click-through to detail views.

5.9 CRM — Forms (/crm/forms)

Embeddable lead capture forms. Shows form name, submission count, embed code with copy button, and preview link.

5.10 Opportunities (/opportunities)

Pipeline view with 7 telecom-tuned stages: Qualification → Discovery/Site Survey → Proposal → Contracting → Closed Won → Awaiting Install → Activated. Deal detail page with stage stepper, ACV calculator (lines × MRC × 12), and engagement analytics.

5.11 Admin Panel (/admin)

Restricted to admin role. Three sections:

1. **Pending Approvals** — one-click approve/deny for each registration request. Shows name, email, domain, company, date.
2. **All Registrations** — full table with status badges (pending/approved/denied).
3. **Quick Actions** — Invite Partner (email input + send) and Audit Log link.

All approval/denial actions are logged to the `audit_log` table.

5.12 Settings — Brand & Company (/settings/brand-kit)

Logo upload (drag-and-drop, max 5MB, PNG/JPG/SVG), company info fields, primary contact for co-branded materials, and passkey authentication setup card.

5.13 Settings — Team Members (/settings/users)

Invite user form (email + role: Rep/Admin), team member list with role badges and "(you)" indicator, and Billing/Support/Legal key contacts section.

5.14 Login (/login)

Email/password form with "Request Access" link to `/register`.

5.15 Register (/register)

Multi-state form: form → checking → blocked/pending/approved. Validates business email domain. Blocks free-mail providers. New domains held for admin approval.

6. CRM — Lead Management

The built-in CRM replaces the need for a separate tool. It covers the full lead lifecycle:

New → Contacted → Qualified → Proposal Sent → Won/Lost

Features

- **Lead table** with status badges and filters
- **Contact directory** linked to companies
- **Company profiles** with industry and lead counts
- **Embeddable forms** for website lead capture
- **Pipeline tracking** with estimated value per lead
- **Search** across all entities

Data Scoping

Every record carries `account_id` and `owner_user_id`. Row-Level Security ensures: - **Users** see only their own records - **Managers** see all records in their account - **Admins** see all records globally

7. Training Hub

Video Library

9 onboarding and product training videos across 4 categories: - **Product Training:** POTS Replacement overview, UCaaS walkthrough, SIP trunking deep dive - **Technical:** Wireless failover setup, installation guides - **Sales:** Objection handling, pipeline building, battle cards - **Onboarding:** Portal orientation, deal registration process

Document Library

12 downloadable resources: - Sales playbooks, competitive intelligence briefs, feature comparison matrices - Technical specs and deployment guides - Partner agreement templates, co-branding guidelines - Pricing and commission structures

Certification (Planned)

Structured certification tracks with badges and rewards for completing training modules.

8. Content Library

Folder Structure

Folder	Contents
Co-Branded Collateral	Sales decks, one-pagers, competitive briefs with partner branding
Pitch & Demo Resources	Demo scripts, elevator pitches, presentation templates
Compliance & Life-Safety	NFPA 72, elevator, fire-alarm line modernization materials

Share Tracking (Planned)

When a partner shares a document, the system generates a tokenized public link. Each view is logged, feeding: - Notification to the partner ("Your POTS one-pager was viewed") - Engagement analytics on the deal detail page

9. Documentation / LMS

Course Sections

1. **Working with TrustedNetworkx** — Your team, key documents, support model, pipeline goals
2. **Account & Operations** — Billing, commissions, deal registration
3. **Product Training** — POTS replacement, Hosted PBX/UCaaS, SIP, failover, portal
4. **Sales Enablement** — Pitch scripts, objection handling, competitive positioning
5. **Marketing** — Co-branding, campaign materials, social media assets
6. **Client Onboarding** — Installation process, timelines, customer handoff

Support Model

- **Partner = Level 1 support** — First line for end customers
 - **TrustedNetworkx NOC = Level 2 support** — Escalation for complex issues
 - TrustedNetworkx does not communicate directly with end clients — the partner is the face of the service
-

10. Opportunities & Pipeline

7 Stages (Telecom-Tuned)

1. **Qualification** — Initial contact, needs assessment
2. **Discovery / Site Survey** — Technical evaluation, site walk
3. **Proposal** — Quote generation, solution design
4. **Contracting** — Agreement, terms, signatures
5. **Closed Won** — Deal signed, handoff to implementation
6. **Awaiting Install** — Equipment shipped, install scheduled
7. **Activated** — Service live, billing started

Deal Economics

- **Lines/seats × MRC per line × 12 months** = Estimated ACV
- Calculated live on the deal detail page

- Admin sees all deals across all partners
-

11. Admin Panel

Located at `/admin` — only accessible to users with `role = "admin"`.

Pending Approvals

- Each registration request shows: name, email, domain, company, submission date
- **Approve** → Creates account, logs action, partner can sign up
- **Deny** → Request closed, logged to audit

Invite Partner

Manual email invite form. Sends Supabase invite email. Recipient signs up and is auto-attached to their domain's account.

Audit Log

Records every admin action: - Account approvals and denials - Role changes - Cross-tenant access - User deactivations

12. Settings

Brand & Company

- Logo upload (feeds co-branded collateral generation)
- Company name (locked — contact channel manager to change)
- Website, phone, email
- Partner profile fields: lines under management, team size, voice platforms, PSA/ticketing, verticals

Team Members

- Invite by email with role assignment (Rep or Admin)
- Team member list with avatars, role pills, "(you)" indicator

- Key contacts: Billing, Support, Legal (name/email/phone)

Passkey Authentication (Planned)

WebAuthn passkey support for passwordless sign-in.

13. AI Assistant

Floating green button bottom-right on every page. Opens a right-side chat drawer:

- Dark header: "TrustedNetworkx Assistant" - Empty state prompt: "How can I help? Ask about the Partner Hub, platform, sales materials, pricing, or TrustedNetworkx solutions." - Disclaimer: "Responses are generated using AI and may contain mistakes."

Planned: RAG-powered — trained on documentation, product specs, and sales playbooks.

14. Data Model

Core Tables (Supabase Postgres)

```
accounts          - id, domain, company_name, plan, is_active
profiles          - id (FK → auth.users), email, full_name, role, account_id
pending_registrations - email, domain, company_name, status, reviewed_by
blocked_domains   - domain, reason
audit_log         - actor_id, action, target_user_id, details (JSONB)

leads             - account_id, owner_user_id, name, company_name,
                  status, estimated_value, contact info, notes
contacts          - account_id, owner_user_id, first_name, last_name,
                  email, phone, company_id, status
companies         - account_id, owner_user_id, name, website,
                  industry, size, address
```

Row-Level Security

Every table carries `account_id` and `owner_user_id`. RLS policies scope queries automatically: - `WHERE owner_user_id = auth.uid()` for user role - `WHERE account_id = current_account` for manager role - No filter for admin role (sees all)

15. Security & RLS

Authentication

- Supabase Auth with JWT tokens
- Role and `account_id` embedded in JWT claims
- Session validated on every request
- Passwords hashed with bcrypt

Data Isolation

- Row-Level Security on all tables
- Every query filtered at the database level — not hidden in UI
- Out-of-scope IDs return 404 (not 403) to avoid leaking existence
- Service role key never exposed to client

Audit Trail

- All admin actions logged to `audit_log`
 - Actor ID, target user, action type, timestamp, details (JSONB)
 - Admin-only read access to audit log
-

16. Deployment & Operations

Source Code

- **Repository:** `github.com/kd6720/TrustedNetworx-Partner-Hub`
- **Branch:** `main` (push-to-deploy)

Environment Variables

```
NEXT_PUBLIC_SUPABASE_URL=https://xzivshbiuntjspleimkq.supabase.co
NEXT_PUBLIC_SUPABASE_ANON_KEY=<anon-key>
SUPABASE_SERVICE_ROLE_KEY=<service-role-key>
```

Deploy

1. Push to `main` → GitHub Actions builds
2. Vercel picks up the build and deploys
3. `npx supabase db push` applies any new migrations

Local Development

```
git clone git@github.com:kd6720/TrustedNetworx-Partner-Hub.git
cd TrustedNetworx-Partner-Hub
npm install
cp .env.example .env.local    # Fill in Supabase keys
npm run dev                  # http://localhost:3000
```

Migrations

```
# Push new migrations to Supabase
npx supabase db push

# Pull remote schema changes
npx supabase db pull
```

17. FAQ

Q: Can a partner see another partner's data? No. RLS enforces strict tenant isolation. Even if they guess a record ID, the database returns nothing.

Q: How do I add a new partner? Go to `/admin` → "Invite Partner" → enter their work email. They receive an invite and sign up.

Q: Can someone sign up with a Gmail address? No. Free-mail domains (Gmail, Yahoo, Outlook, etc.) are blocked. Business email required.

Q: What happens when I approve a registration? The partner's domain gets an account. They can sign up. Their profile is auto-created with the `user` role. Their data is isolated to their account.

Q: How do I see all deals across all partners? As admin, go to `/opportunities` or `/crm` — you see everything. Agents see only their own.

Q: Where is the data stored? Supabase Postgres (us-east-1). All tables have RLS. Backups managed by Supabase.

Q: Can I change a user's role? Yes. Update the `role` field in the `profiles` table (via Supabase dashboard or API). The change takes effect on next login.

Q: How do I deactivate a user? Set `is_active = false` in their profile. Their session is invalidated. Their data is preserved.

Q: Is there an API? The Supabase REST API is available at `https://xzivshbiuntjspleimkq.supabase.co/rest/v1/`. Use the anon key for client-side (RLS-scoped) or service role key for admin operations.

Q: Can I white-label this for another brand? Yes. The MIX Networks Partner Hub (`kd6720/MIX-Networks-Partner-Hub`) is a separate deployment with the same codebase, rebranded for MIX Networks. Both run on the same architecture.
