

TrustedNetworkx Partner Hub — Admin Guide

Partner Hub — Admin Guide

For Carter Dewey · TrustedNetworkx

As the platform admin, you have **unrestricted access** to everything. This guide covers what only you can do.

Your Dashboard

When you sign in at `/login`, you'll see a blue banner at the top of the CRM:

" Admin view: You see all accounts and all data. Agents see only their own records."

This means every list, every stat, every pipeline view is **global** — across all partner agencies.

What Only You Can Do

1. Approve or Deny New Partners

Partners request access at `/register`. Their requests land in your **Admin Panel** (`/admin`).

To approve: 1. Go to **Settings** → **Admin Panel** (or click `/admin`) 2. Under "Pending Approvals," review each request 3. Click **Approve** — their domain gets an account, they can sign up 4. Click **Deny** — request closed, they're blocked

You'll see each request's: name, email, domain, company name, and date submitted.

What happens on approve: The `pending_registrations` table updates to "approved." An account is created for their domain. When they sign up, they auto-attach to that account.

2. Invite Partners Manually

Skip the registration flow entirely:

1. Go to `/admin`
2. Under "Invite Partner," enter their work email
3. Click **Invite**
4. They receive a Supabase invite email → set password → auto-attached to their account

Use this for partners you've already spoken to — it's instant.

3. View All Registrations

The "All Registrations" table at `/admin` shows every registration ever submitted: approved, denied, and pending. Useful for tracking who's requested access over time.

4. Audit Log

Every admin action is logged: - Who you approved/denied - When you changed a role - When you accessed another account's data

The audit log is queryable via the `audit_log` table in Supabase (or through the Admin Panel audit link — coming soon).

5. See All Pipeline Deals

Go to `/opportunities` or `/crm` . You see every deal from every partner: their pipeline stage, estimated ACV, close dates, and engagement analytics.

What partners see: Only their own deals.

6. Manage Partner Accounts

In Supabase dashboard → Table Editor → `accounts` : - View all partner domains and company names - Toggle `is_active` to suspend an entire agency - Change plan tier (`free` / `pro` / `enterprise`)

7. Assign or Change Roles

In Supabase dashboard → Table Editor → `profiles` : - Set `role` to `admin` , `manager` , or `user` - Role changes take effect on next login - Only you can assign the `admin` role

Quick Reference

Task	Where
Approve a new partner	<code>/admin</code> → Pending Approvals
Invite a partner	<code>/admin</code> → Invite Partner
See all deals	<code>/opportunities</code> or <code>/crm</code>
See all leads	<code>/crm/leads</code>
Suspend an agency	Supabase → <code>accounts</code> → <code>is_active = false</code>
Change a user's role	Supabase → <code>profiles</code> → <code>role</code>
View audit log	Supabase → <code>audit_log</code> table

Your Login

- **URL:** `https://hub.trustednetworkx.com/login`
- **Email:** `carter@trustednetworkx.com`
- **Role:** `admin` (global access)

If you forget your password, use the Supabase dashboard → Authentication → Users → Reset Password.

Security Notes

- Your admin access bypasses all Row-Level Security — you see everything
 - Never share your password or the service role key
 - The anon key is safe to expose (it's in the client) — it's RLS-scoped
 - Deactivated users cannot sign in, but their data is preserved
-
